

Georgia Physician Workforce Report

Based on 2017 – 2018 Licensure Renewal Data
and New Licensees
Primary Care and Core Specialties

Georgia Board of Health Care Workforce
Published October 2019

Acknowledgements

This report was produced under the direction of LaSharn Hughes, Executive Director; Leanna Greenwood, Senior Data Analyst; Tommy Kelly, System Support Specialist; G.E. Alan Dever, MD PhD, Consultant; Jocelyn Hart, Data Analyst; and Janice Campbell, Administrative Assistant.

The Board would like to thank the Georgia Composite Medical Board for providing physician licensure and renewal data.

This document is provided to the Chairperson Antonio Rios, MD and the Georgia Board of Health Care Workforce members on behalf of Executive Director LaSharn Hughes.

Executive Summary

The 2017-2018 physician renewal cycle represents the 32nd year the Georgia Board of Health Care Workforce has examined physician supply and demand in the State of Georgia. The purpose of this document is to measure and track trends in physician demographic characteristics, supply, and distribution using data from the licensure and license renewal process from January 2017 to December 2018. The physician data is compiled, validated, and analyzed by the Georgia Board of Health Care Workforce staff and presented on the state, county, and Primary Care Service Area (PCSA) levels. This document highlights trends in physician workforce patterns such as:

- Physician demographics by specialty, age, gender, plans to retire, and race.
- The total number of physicians and rate per 100,000 people in the population.

There were a total of 36,175 physicians who renewed their licenses (32,094) or applied for a new license (4,081) during the 2017-2018 cycle. Of those, 13,704 were removed because they indicated that they either: were retired (481) or did not work in the state of Georgia (13,223). This left a valid physician workforce of 22,471 physicians who are licensed and actively practicing in a Georgia location.

For the entire state of Georgia, the overall rate of *actively licensed and practicing* physicians per 100,000 population is 213.6, compared to the national average of 301.¹ Note, however, that this national average did not use the same criteria to exclude retired or out of state/duplicate licensees.

Physician Workforce Trends Since Last GBHCW Report in 2015

- Georgia's population has grown from 10,214,860 in 2015 to 10,519,475 in 2018, a growth of 3%.
- The rate of physicians per 100,000 population has increased from 209.7 in 2015 to 213.6 in 2018.
- The total number of physicians in primary care/core specialties has increased from 9,269 in 2015 to 12,670 in 2018. Note that since the last report in 2015, Emergency Medicine and Psychiatry have been added to primary care/core. If these two specialties are removed from the comparison, Georgia has still seen a growth in primary care/core to 10,322 in 2018, which represents 11% growth over the time period.
- 49% of all physicians practicing in Georgia work in the top 10 ranked PCASAs, which accounts for 27% of Georgia's population. This is a decrease from 51% in 2015.

¹Young, Aaron, Humayun J. Chaudhry, Xiaomei Pei, Katie Arnhart, Michael Dugan, and Scott A. Steingard. 2019. "FSMB Census of Licensed Physicians in the United States, 2018." *Federation of State Medical Boards Journal of Medical Regulation* 105(2): 7-23.

Demographics

- 51.8% of the physician workforce is aged 50 or above, which is a decrease from 2015 when 53.4% of the workforce fell into this age grouping. Still, this is quite a large increase from the year 2000, when 33.8% of the workforce was age 50 or older.
- 12% of physicians plan to retire in the next 5 years, with 54% of those planning to do so being between the ages of 61-70 at the time of licensure or renewal.
- Women make up 34% of the physician workforce, which is an increase from the 2015 figure of 31.3%. Together, this indicates that the female percentage of Georgia's physician workforce is nearing the Federation of State Medical Board's national average of 35.1%¹.
- 77.7% of physicians accept Medicaid, while 72.4% accept new Medicaid patients. 80.8% of physicians accept Medicare, while 77.2% accept new Medicare patients. These figures are down slightly from the 2015 report, but this may be in part due to data missing from the analysis of newly licensed physicians.
- Internal medicine is the largest primary care/core specialty, accounting for 15.7% of the workforce. Next largest is family medicine at 12.4%, then pediatrics at 8.3%.
- Women make up a majority of physicians in two primary care/core specialties: OB/GYN (54.9%) and pediatrics (64.0%). This is a change from 2015, when women were the majority of physicians only in pediatrics.
- The primary care/core specialty with the least gender parity is general surgery, where men account for 85.3% of the workforce. The primary care/core specialty with the most gender parity is OB/GYN, where there is a difference of less than 10 percentage points between women and men.

PCASAs and Counties with no Physicians, 2018

| SPECIALTY | NUMBER OF PCSAS WITH NO PHYSICIANS | POPULATION | NUMBER OF COUNTIES WITH NO PHYSICIANS | POPULATION |

| PSYCHIATRY | 30 | 516,692 | 77 | 1,245,664 |
| EMERGENCY MEDICINE | 20 | 315,013 | 58 | 812,877 |

Methodology

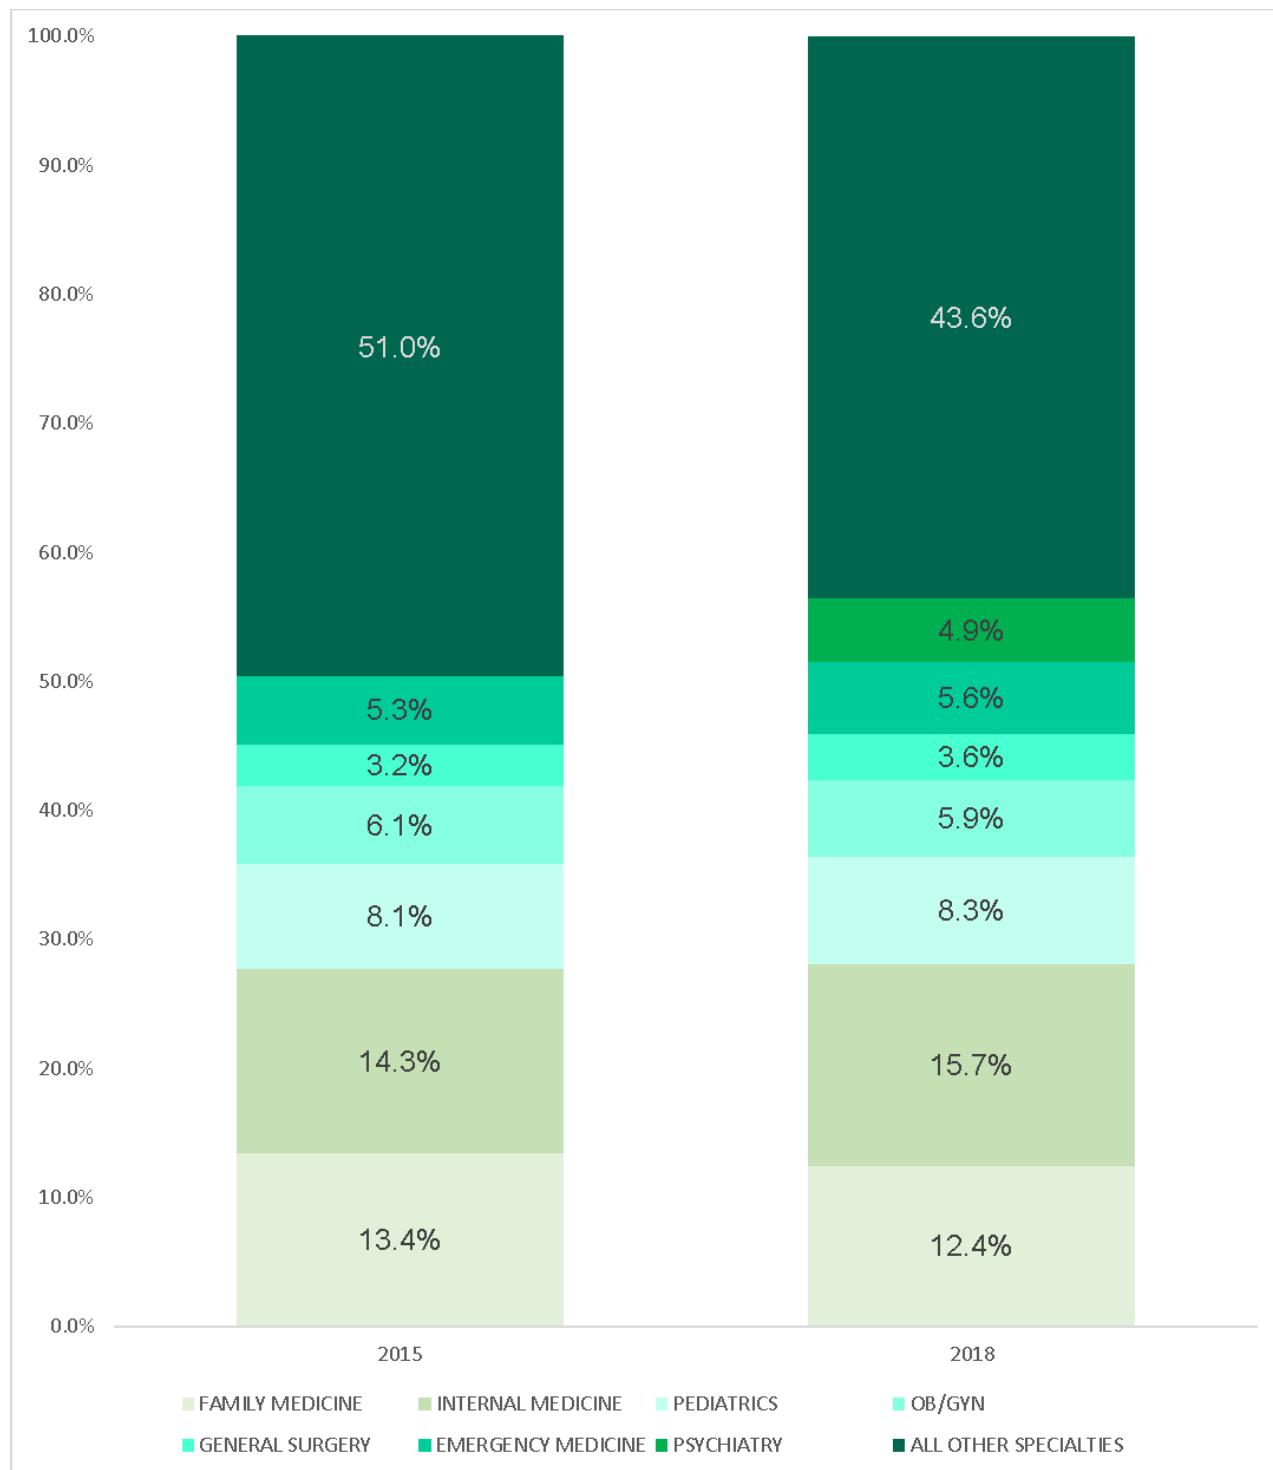

The licensure survey population analyzed here consists of two years' worth of data collected by the Georgia Composite Medical Board. The survey is not mandatory, which means that some data is missing for analysis purposes. GBHCW staff receives the data from the Medical Board and then compiles and validates the survey data to create the analyses presented here. This year, GBHCW is able to analyze new licensees in addition to license renewals.

Physician work location is derived from multiple different fields in the licensure survey, so this warrants a brief explanation of how each person was counted only once. Physicians input up to three work counties and three zip codes, potentially yielding 6 different work locations. To simplify the analysis process, a physician is counted only in one location, which may yield a conservative estimate of the workforce in each county. However, a physician could also have put the same county or zip code for all six fields, but should only be counted as one person, not six.

If a physician did not enter a first work location county, then their second (or if none, third) work location county was counted as their work location. If no Georgia work location counties were entered, then their first, then second, then third work location zip code was used. If a physician entered only one work location zip code, then they were counted for the county that contains that zip code. This means that if a physician entered that they work in any Georgia county or valid Georgia zip code, they are counted as part of the workforce of 22,471.

The rate of total physicians per 100,000 population was then calculated for each county and PCSA. In addition, rates per 100,000 were calculated for each of the seven primary care/core specialties by PCSA and by county.

Change in Distribution of Primary Care/Core Specialties within Total Physician Workforce, 2015 and 2018

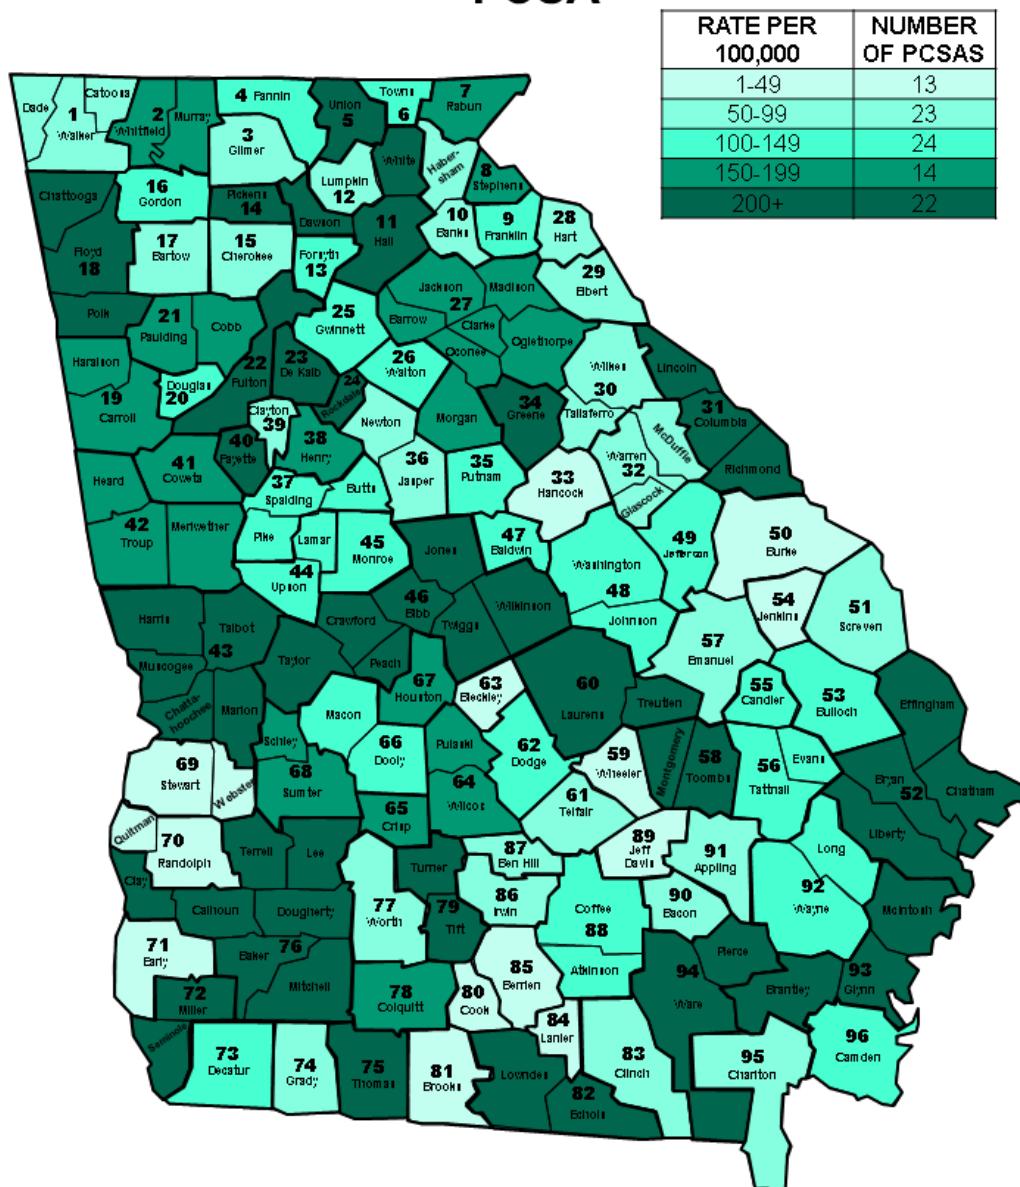

Note: Psychiatry was not tracked as a primary care/core specialty before this 2018 report.

Distribution of Physicians in Primary Care/Core Specialties by PCSA, 2018

Primary Care/Core and Demographic Analysis by MSA/Non-MSA, 2018

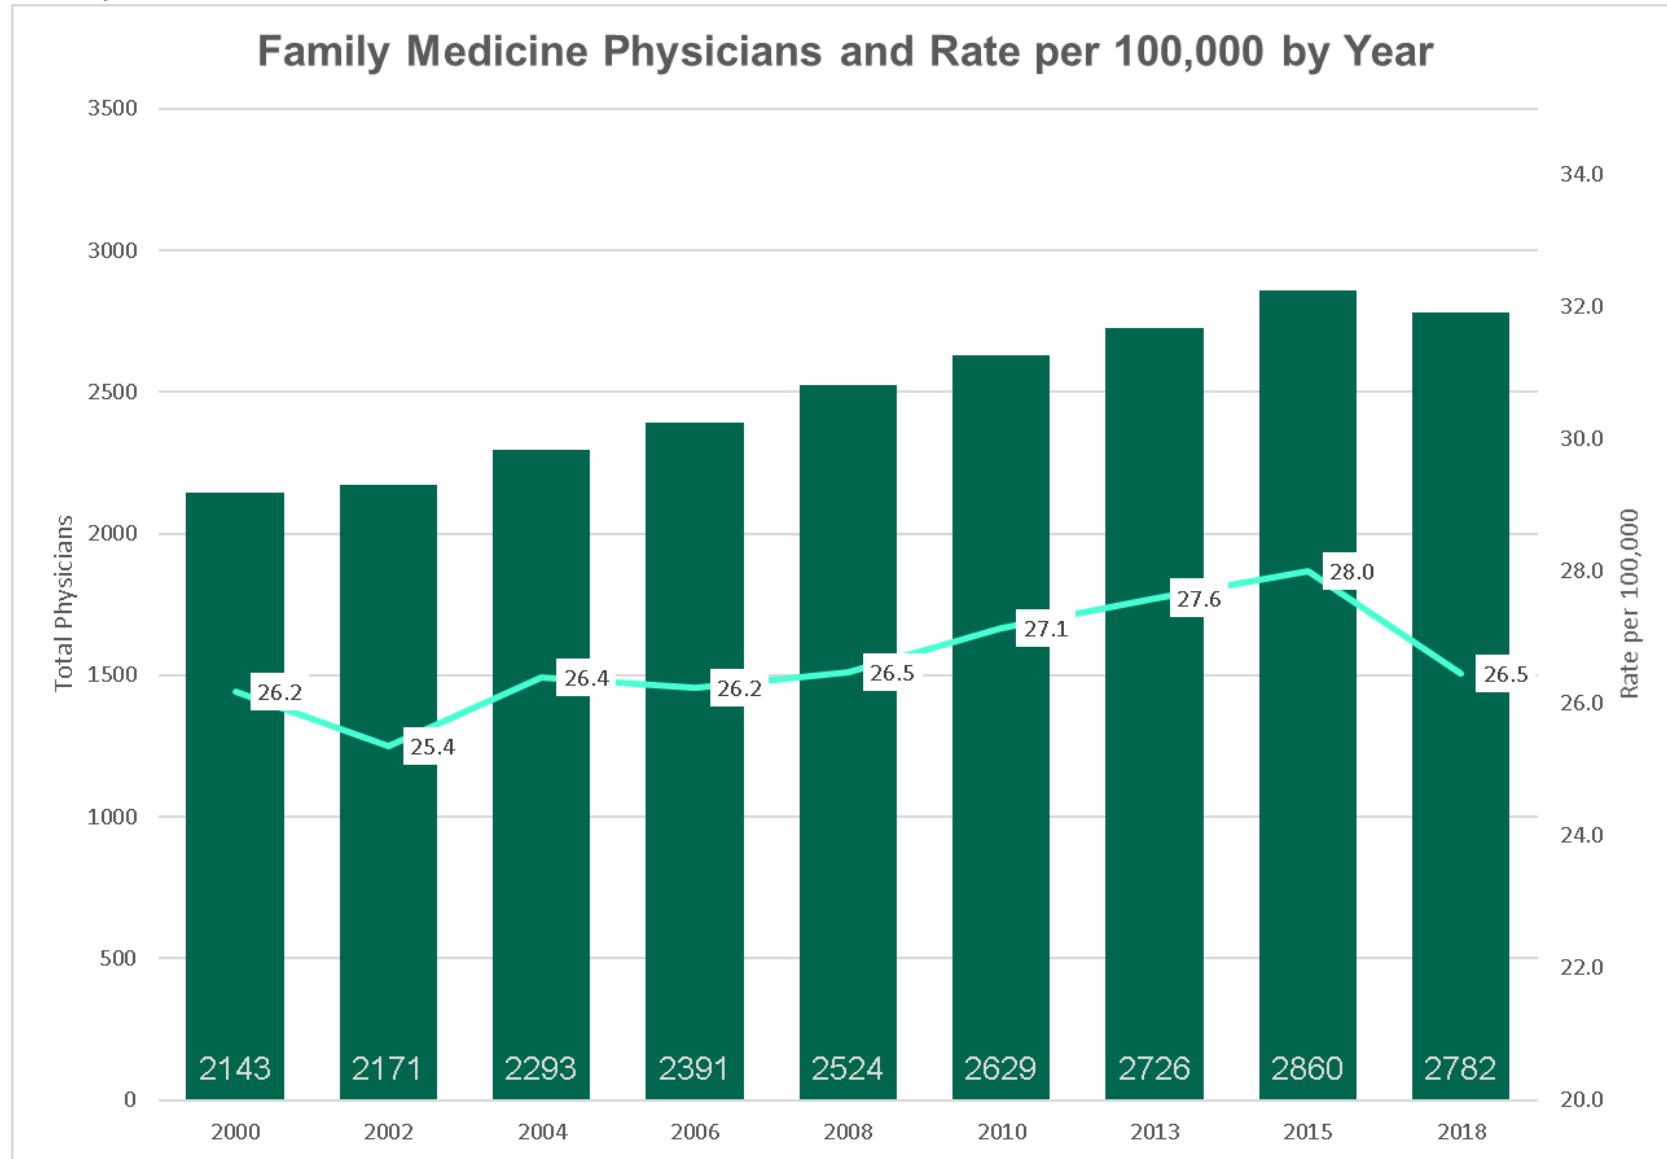

Changes in Rate per 100,000 Over Time by Specialty, 2000-2018

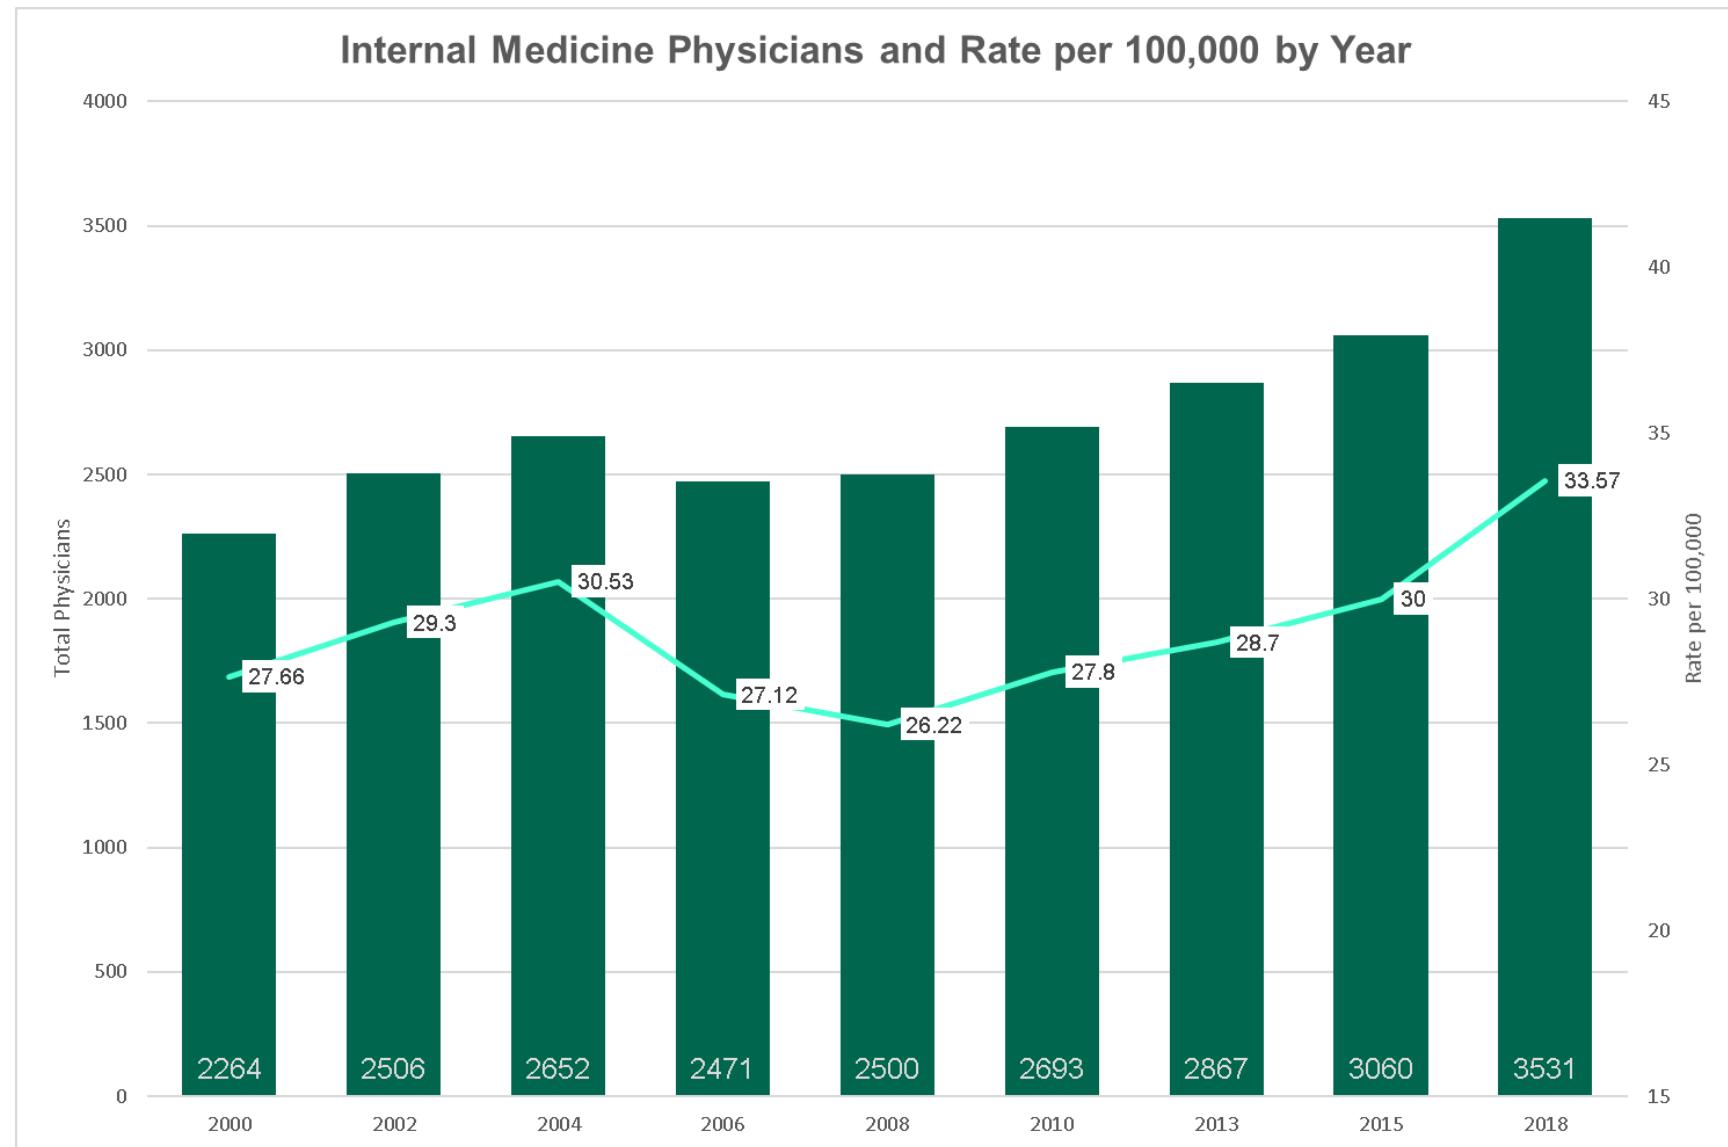

Total Physicians

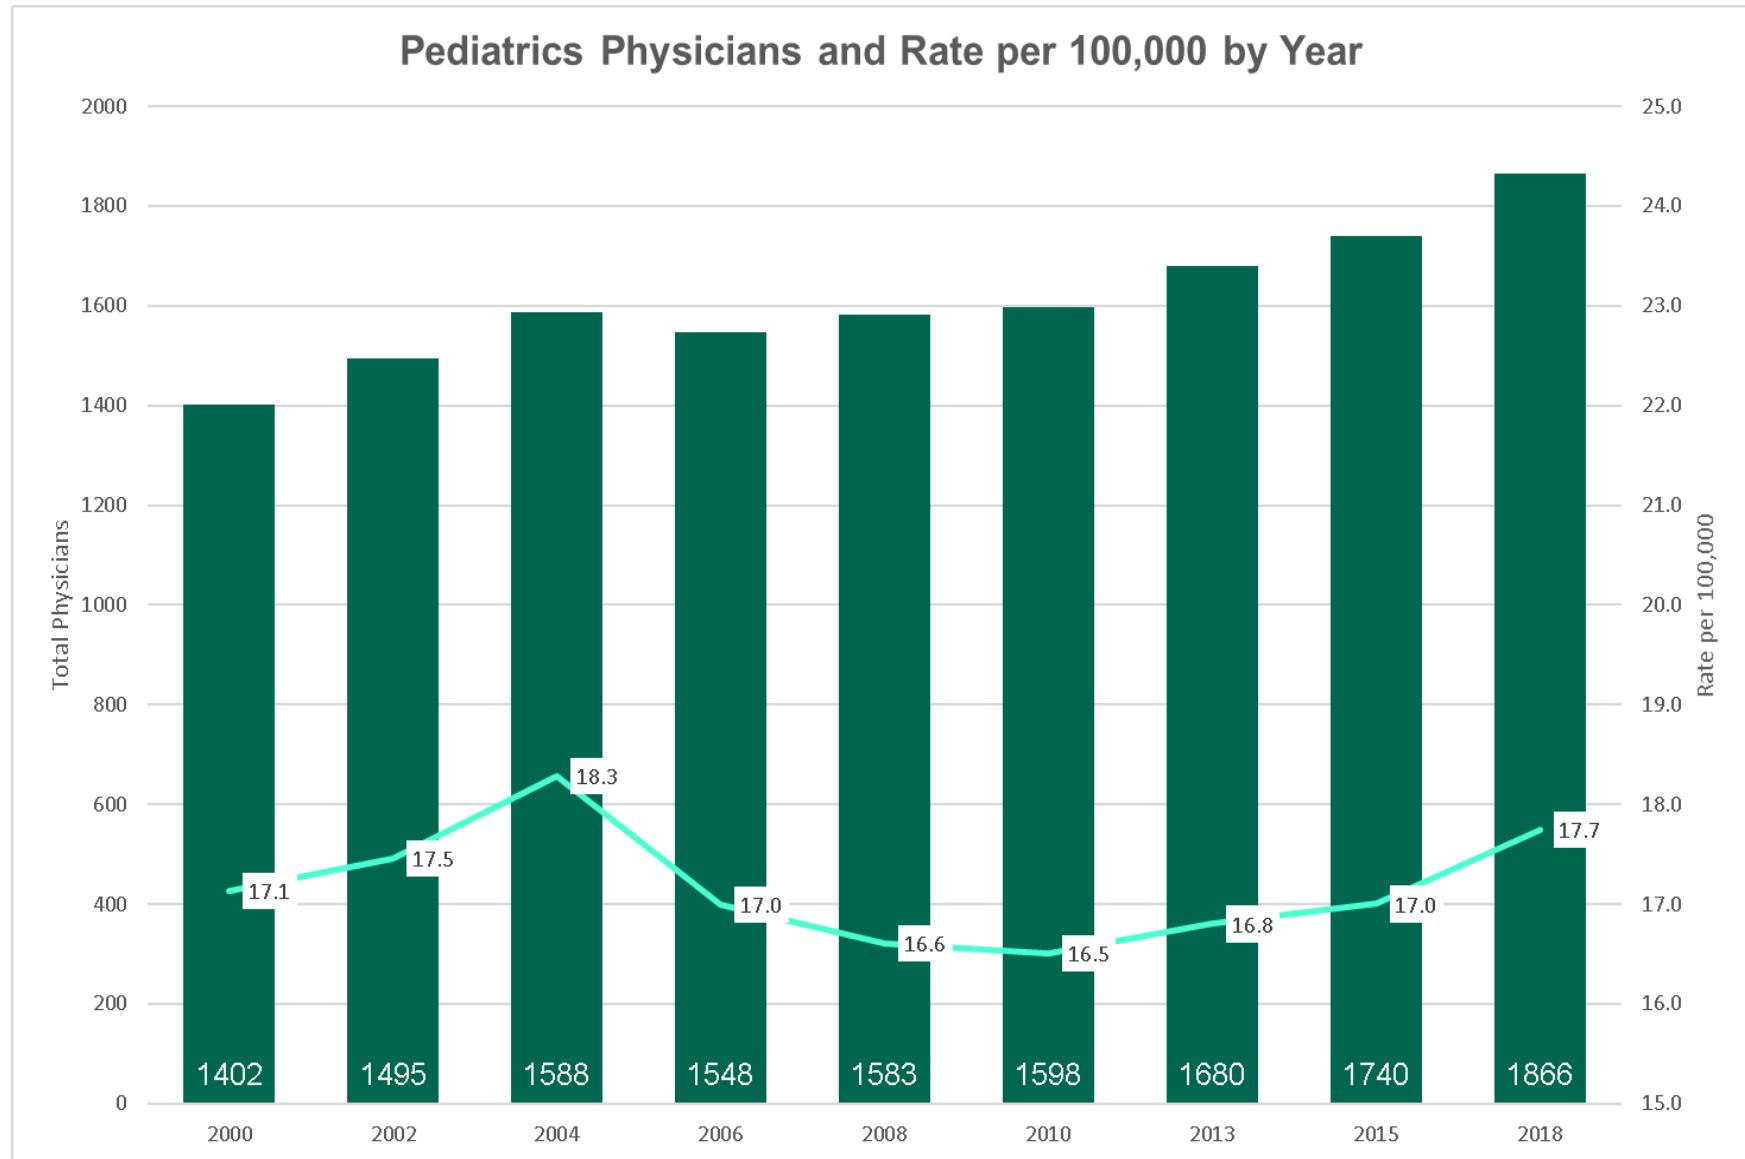

Family Medicine

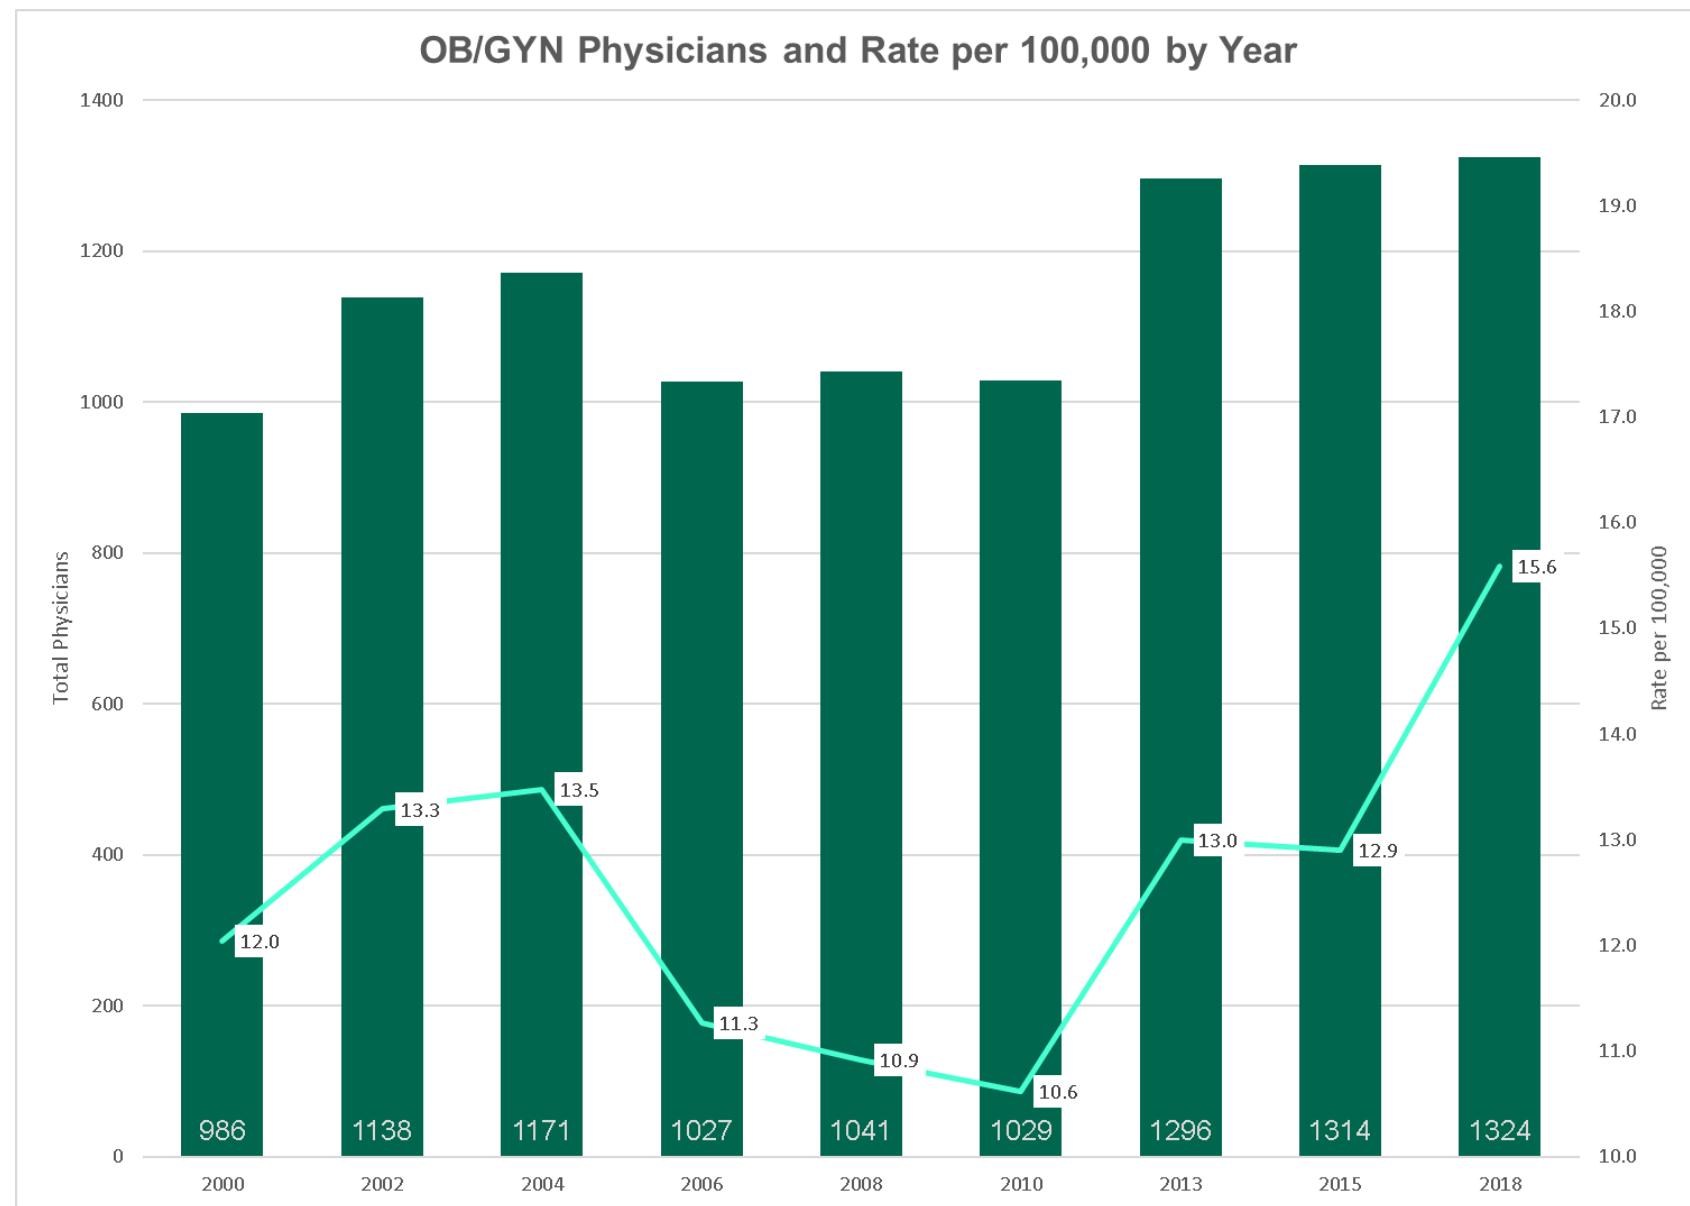

Internal Medicine

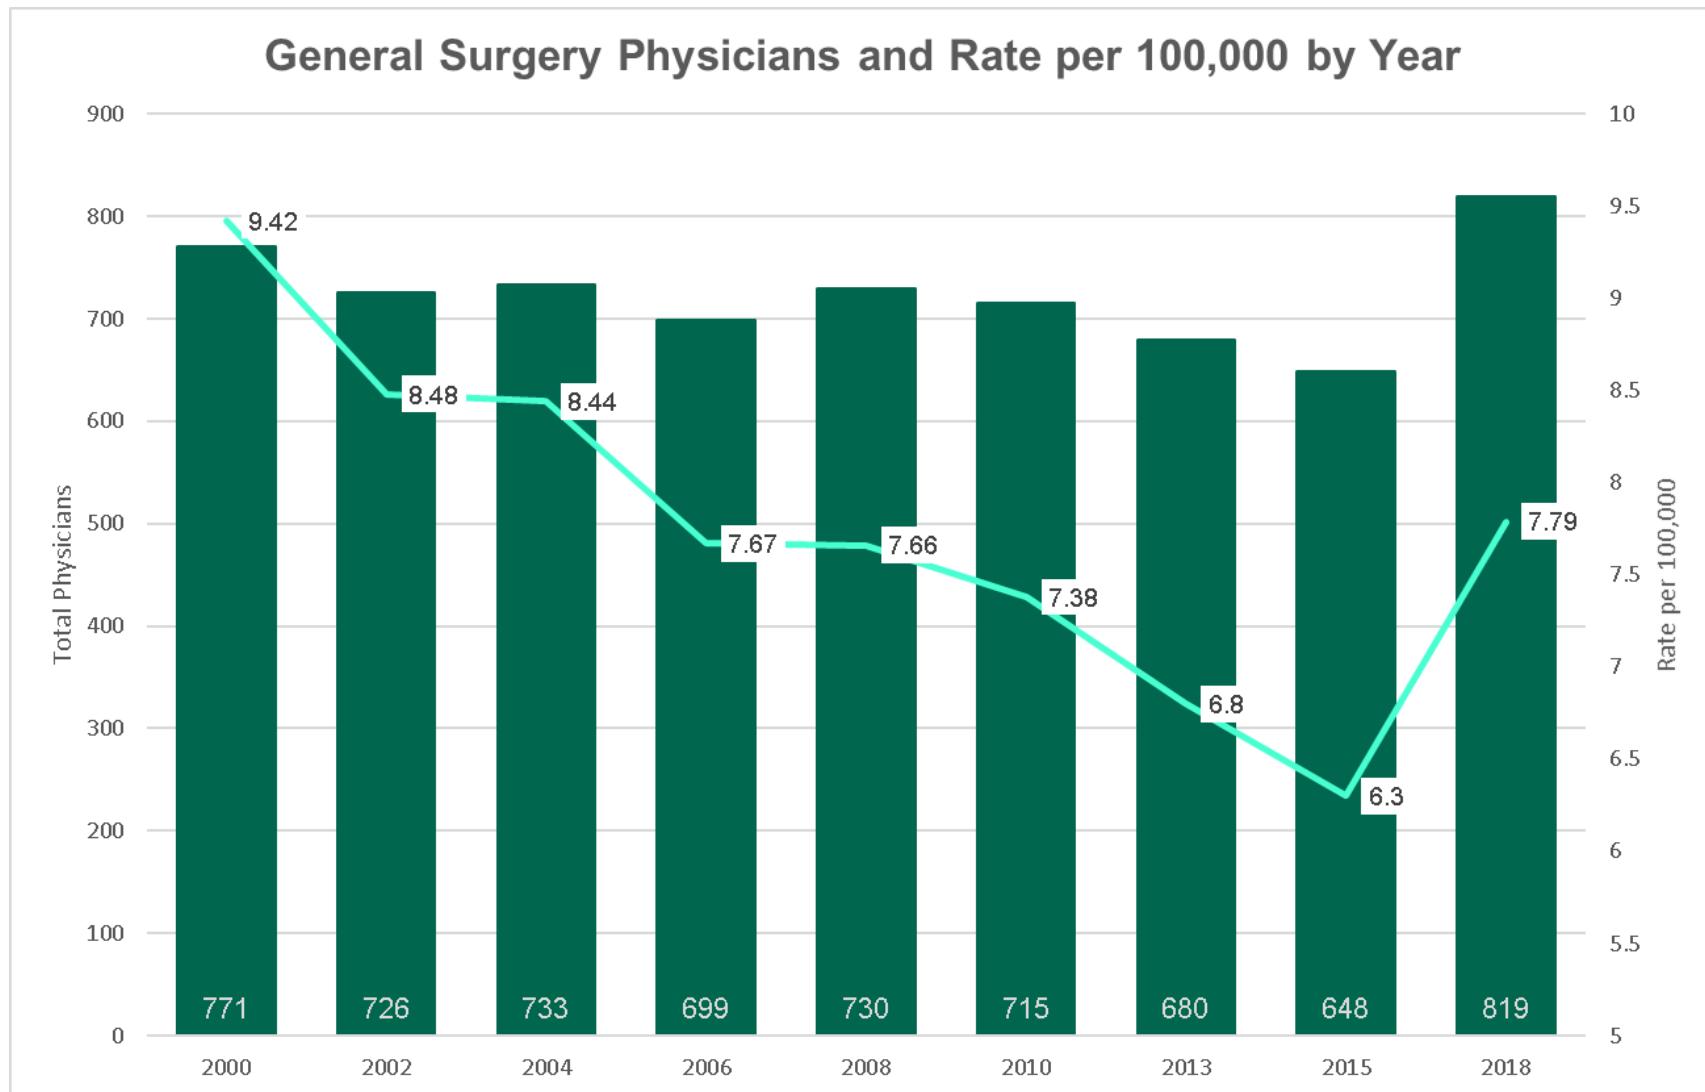

Pediatrics

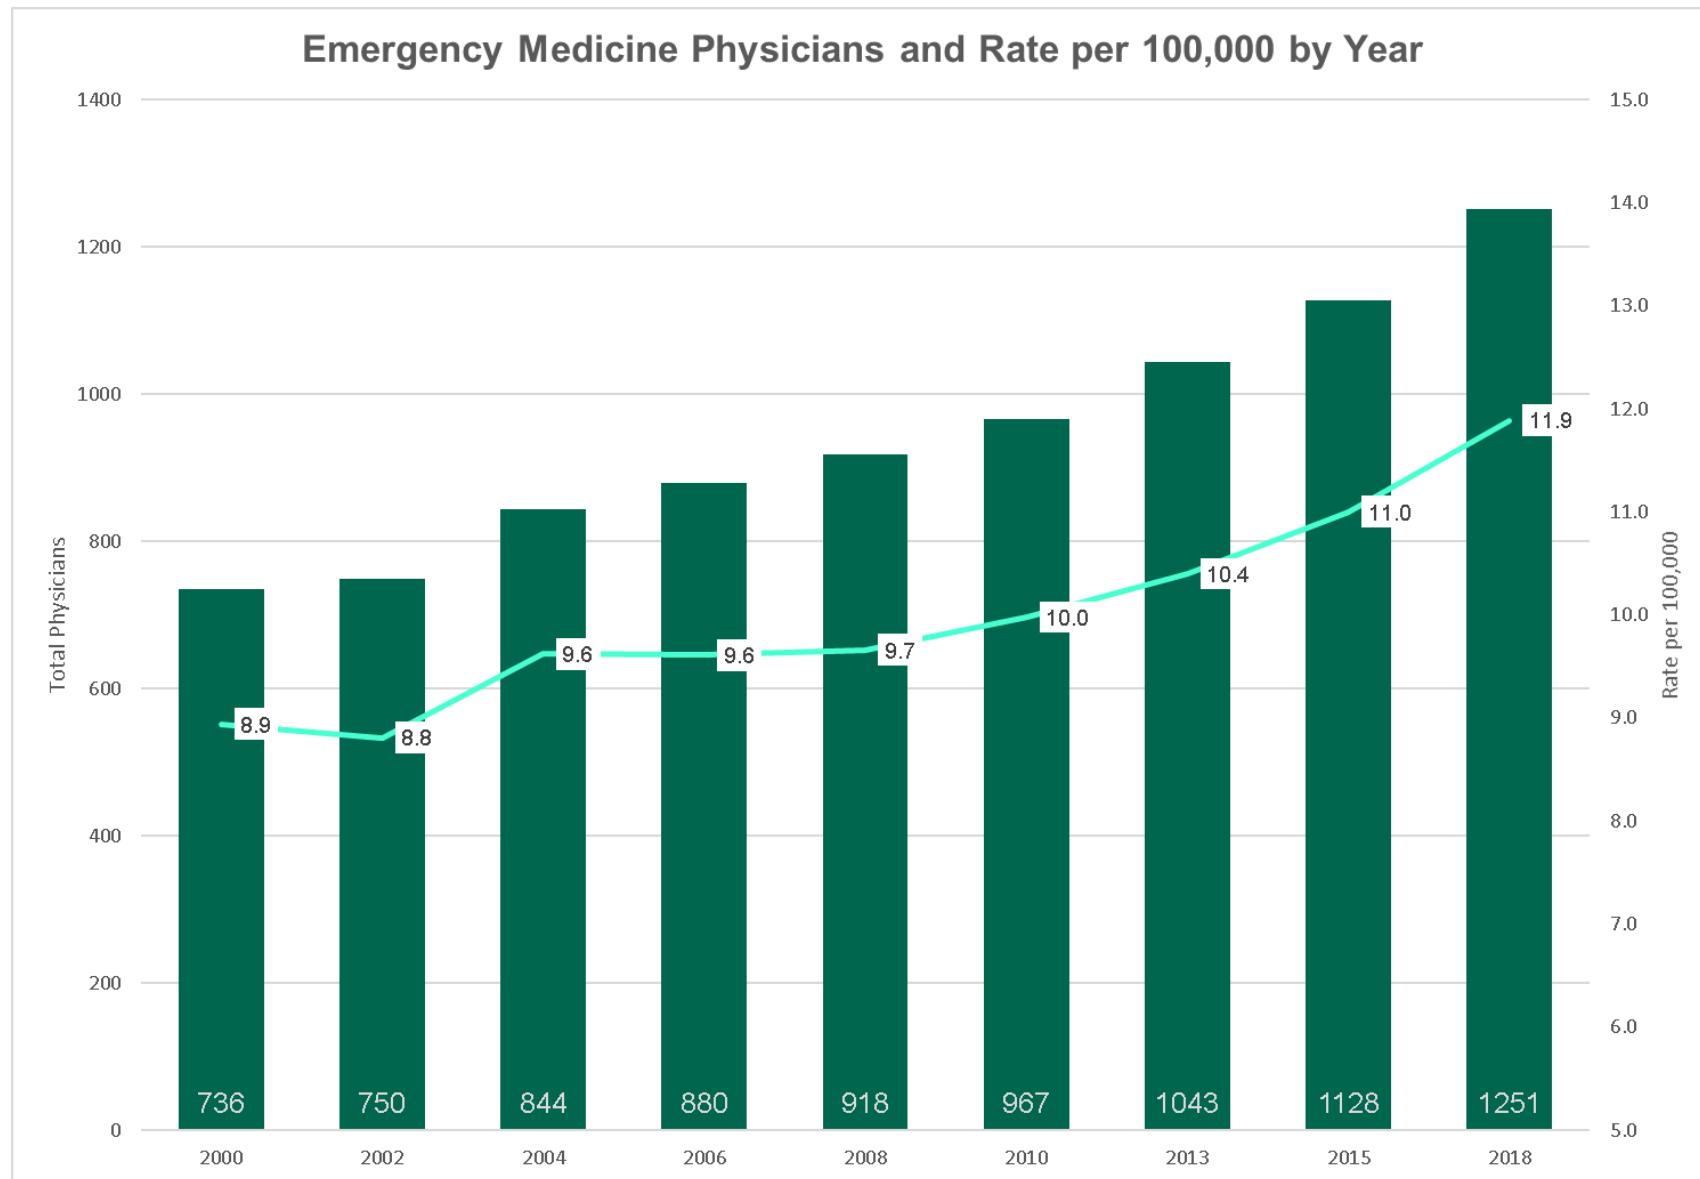

OB/GYN

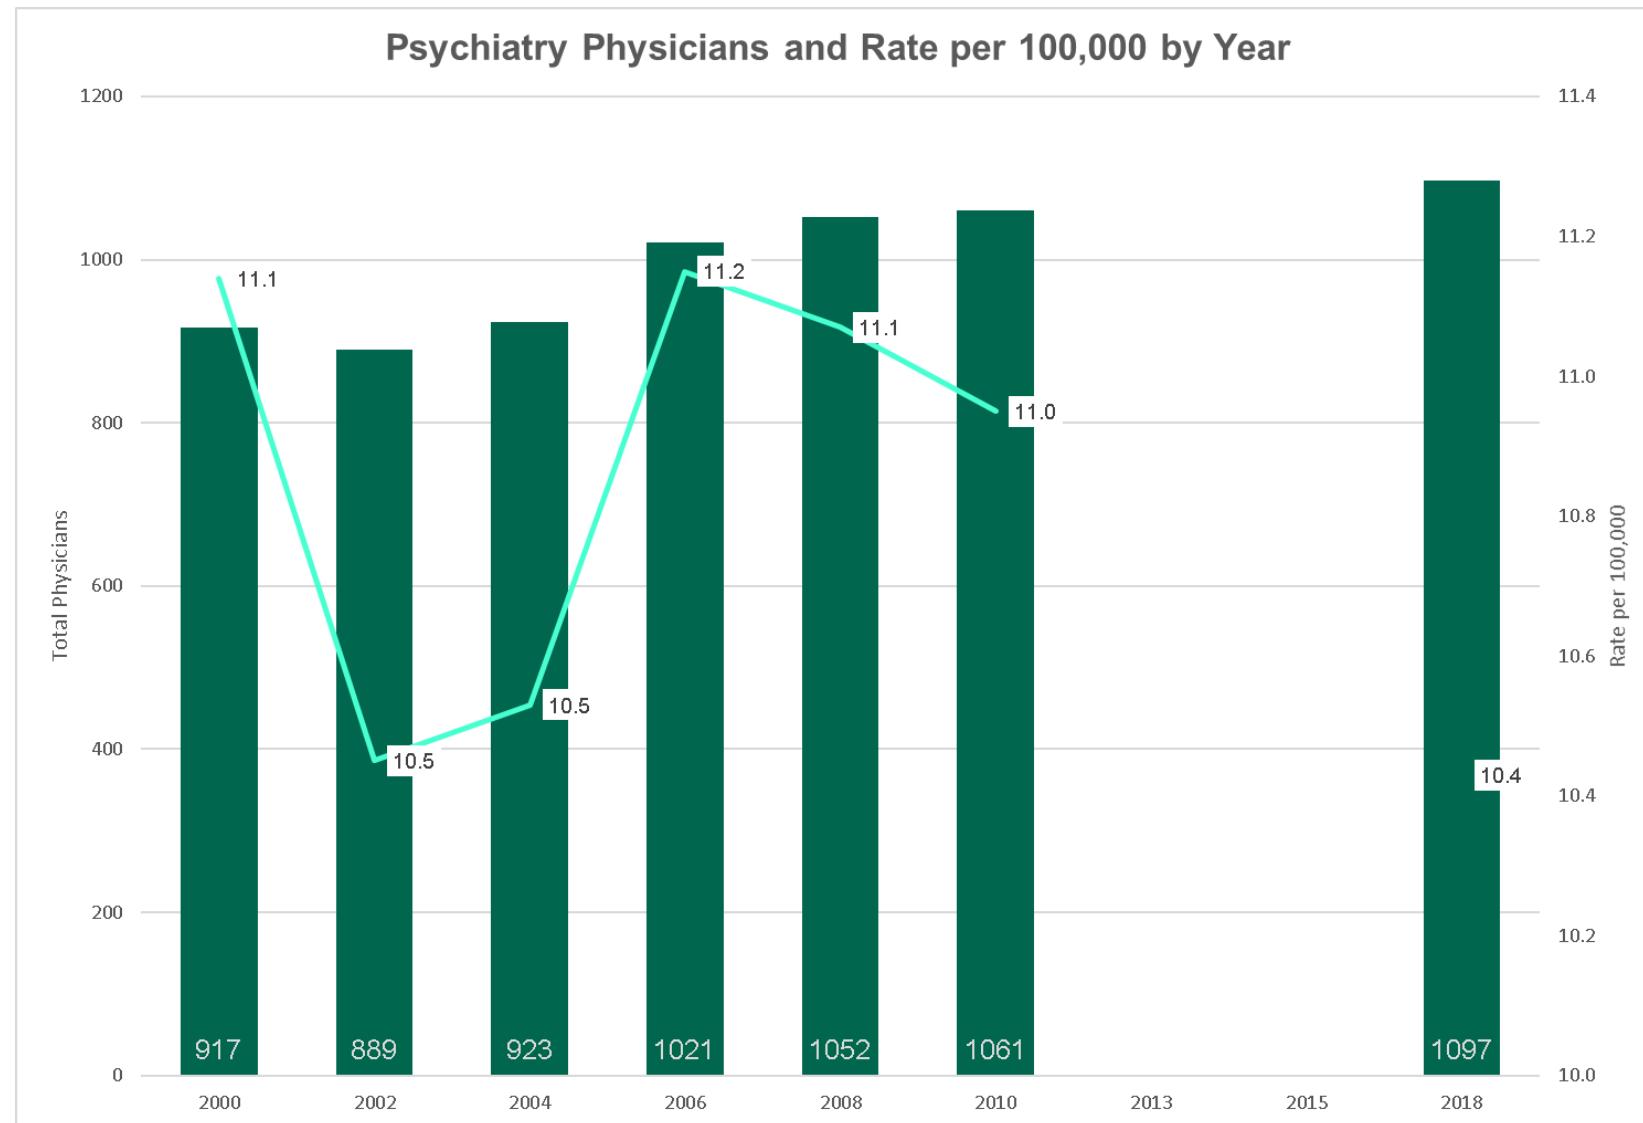

General Surgery

Emergency Medicine

Psychiatry

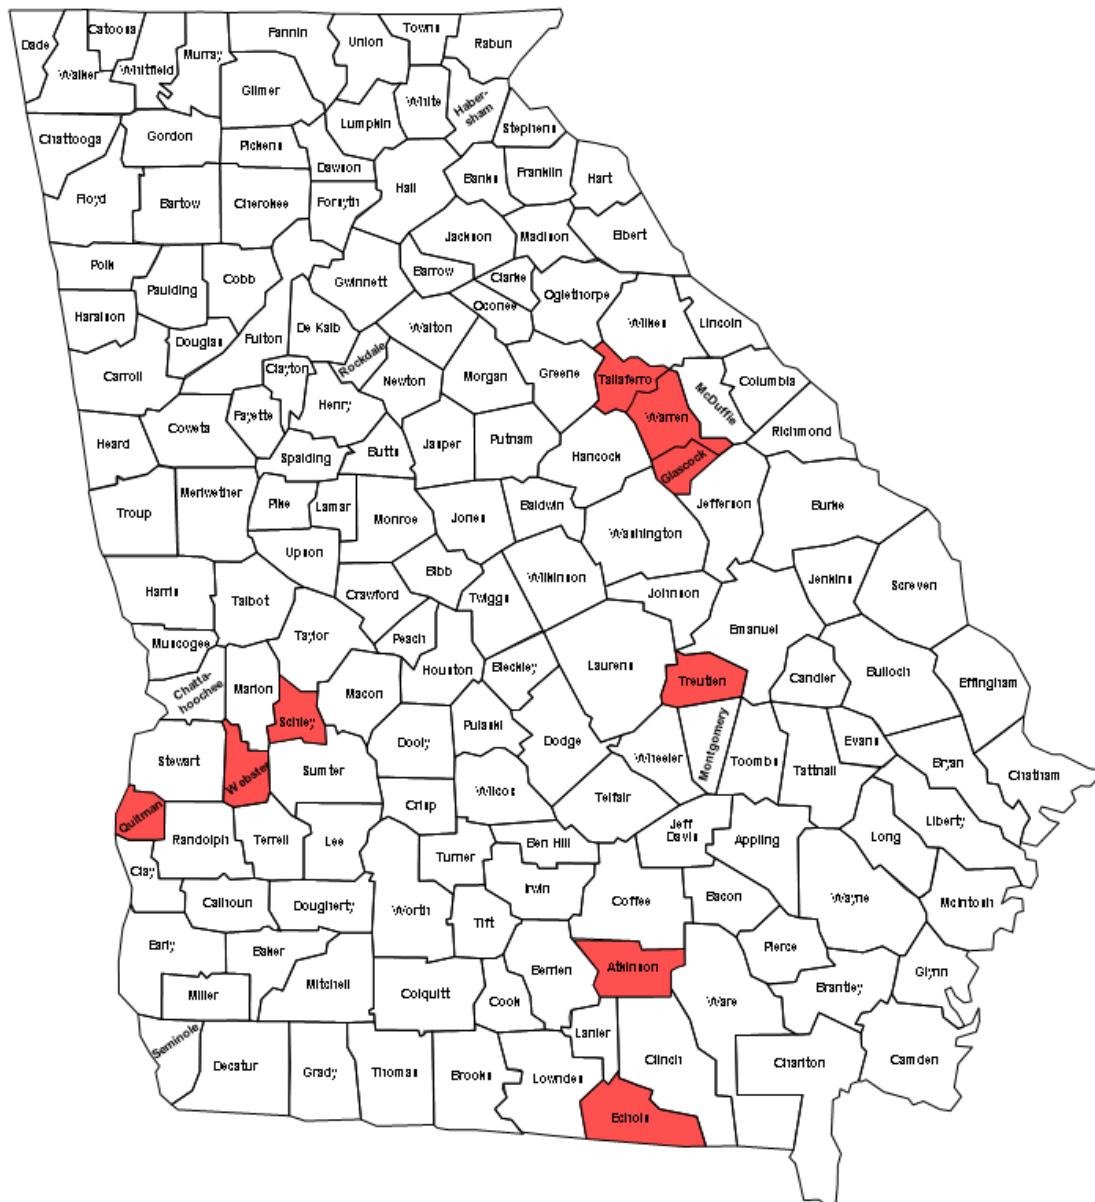

Note: The missing data for 2013 and 2015 are because Psychiatry was not tracked as a primary care/core specialty before this 2018 report.

Distribution of Physicians in Primary Care/Core Specialties by County, 2018

Counties with no Physicians

Counties with no Physicians, 2018

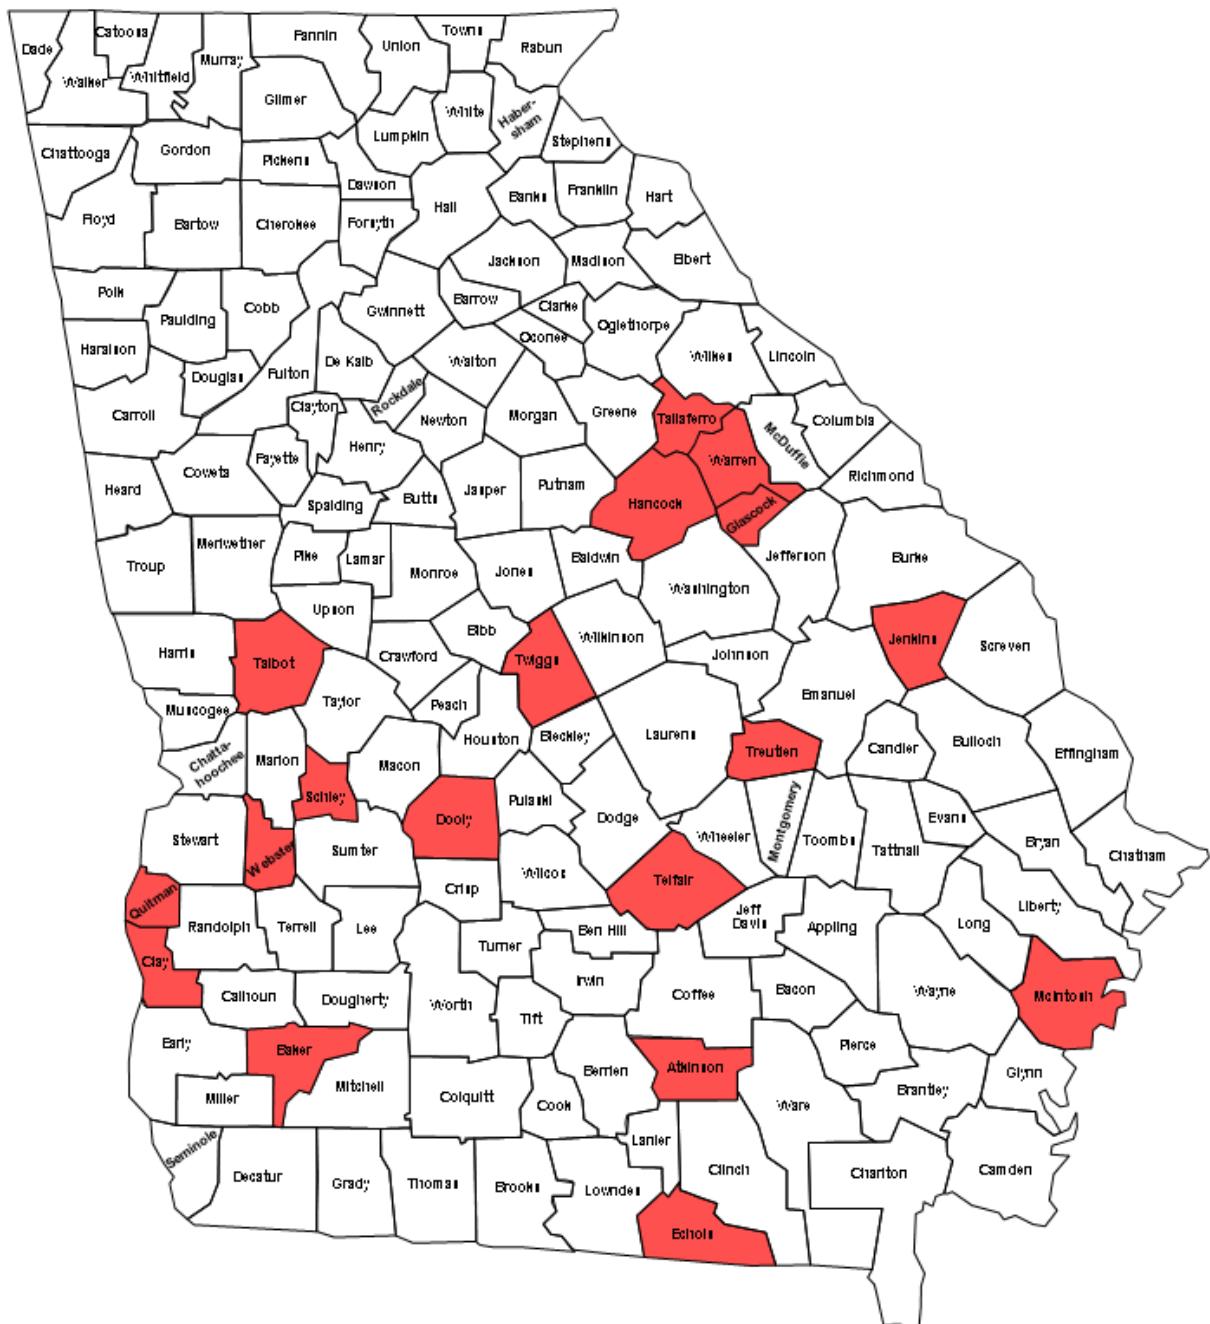

Note: There are 9 counties with no physicians for the years 2017-2018.

Total Physicians Rate and Rank Per 100,000 Population By County, 2018
